

IN THE CLAIMS

The following listing of the claims represents the claims now present in this application.

This listing supersedes and replaces all prior claim listings. Please amend claims 17, 18, 19, 20, 22, 23, 24, 26 and 28 as follows:

17. (Currently Amended) A chemical analytic apparatus which performs various kinds of processing for analyzing ~~[[a]]~~ very small ~~amount of droplet~~ droplets chemically, including:

in a condition where magnetic ultrafine particles are mixed to a droplet,

a conveyance means moving in a direction while applying a magnetic field, wherein ~~by which~~ the droplet, to which said magnetic ultrafine particles were mixed, is conveyed in another liquid, for processing of chemical analysis, ~~by applying magnetic field to~~ due to attraction by said magnetic ultrafine particles to the magnetic field of the conveyance means; and

a processing means by which operations for processing of chemical analysis are performed one by one in the process in which the droplet to which said magnetic ultrafine particles were mixed is conveyed by said conveyance means, wherein

plural kinds of the droplets to which said magnetic ultrafine particles are mixed and of only the droplets are provided, and said processing means includes small compartments separated by plural bulkheads, and said plural kinds of the droplets to which said magnetic ultrafine particles were mixed ~~[[or]]~~ and of only the droplets are ~~arranges~~ arranged in ~~[[each]]~~ said small ~~compartment~~ compartments, and

an optional droplet to which said magnetic ultrafine particles are mixed and which is arranged in an optional small compartment is conveyed by said conveyance means, by passing through each bulkhead ~~provided in each said~~ separating one small compartment from another, and a chemical reactive operation itself or part of the operation is performed by uniting ~~[[it]]~~ the optional droplet with ~~the other~~ another droplet out of said plural kinds arranged in the other small compartments.

18. (Currently Amended) The chemical analytic apparatus according to claim 17, wherein when ~~[[an]]~~ the optional droplet out of said plural kinds to which said magnetic ultrafine particles are mixed and which is arranged in an optional small compartment is conveyed to said

other small ~~compartment~~ compartments by said conveyance means by passing through each bulkhead ~~provided in each said~~ separating one small compartment from another,

the optional droplet out of said plural kinds to which said magnetic ultrafine particles are mixed is separated to ~~[[the]]~~ a droplet that includes said magnetic ultrafine particles and ~~[[the]]~~ a droplet that does not include said magnetic ultrafine particles, by using physical and chemical characteristics such as wettability and surface tension of said optional droplet.

19. (Currently Amended) The chemical analytic apparatus according to claim 17, wherein

by controlling the magnetic field which is externally applied to the droplet to which said magnetic ultrafine particles are mixed, said magnetic ultrafine particles are dispersed and cohered in the inside of the droplet, and also the ~~operation~~ operations for processing of chemical analysis of the droplet to which said magnetic ultrafine particles ~~[[is]]~~ are mixed are performed.

20. (Currently Amended) The chemical analytic apparatus according to claim 19, wherein

other than the control of said external magnetic field, ~~[[the]]~~ at least physical and chemical reaction control by ~~at least~~ light, heat or pH is used.

21. (Previously Presented) The chemical analytic apparatus according to claim 17, wherein

in the condition where a specimen for performing chemical reactive operation adhered to surfaces of said magnetic ultrafine particles, said magnetic ultrafine particles are used as a carrier to perform the chemical reactive operation to said specimen.

22. (Currently Amended) The chemical analytic apparatus according to claim 17, wherein

by combining a plurality of said small compartments which are separated by plural bulkheads and which become said processing means, at least a series of chemical reactive operation by ~~at least~~ reaction, separation and dilution to a specimen that adhered to surfaces of said magnetic ultrafine particles is performed.

23. (Currently Amended) A chemical analytic apparatus which performs various kinds of processing for analyzing ~~[[a]]~~ very small ~~amount of droplet~~ droplets chemically, including:

in a condition where magnetic ultrafine particles are mixed to a droplet,
a conveyance step by which a conveyance unit moves in a direction while applying a magnetic field, wherein the droplet, to which said magnetic ultrafine particles were mixed, is conveyed in another liquid, for processing of the chemical analysis, ~~by applying magnetic field to~~ due to attraction by said magnetic ultrafine particles to the magnetic field of the conveyance unit; and

processing steps by which operations for processing of chemical analysis are performed one by one in the process in which the droplet to which said magnetic ultrafine particles were mixed is conveyed by said conveyance step, wherein

plural kinds of the droplets to which said magnetic ultrafine particles are mixed and of only the droplets are provided, and the processing conditions by said processing steps are formed in small compartments separated by plural bulkheads, and said plural kinds of the droplets to which said magnetic ultrafine particles of the plural kinds were mixed or only the droplets are arranged in ~~[[each]]~~ said small ~~compartment~~ compartments, and

an optional droplet out of said plural kinds of droplets to which said magnetic ultrafine particles were mixed and which is arranged in an optional small compartment is conveyed by

said conveyance ~~[[means]]~~ unit by passing through each bulkhead ~~provided in each~~ separating one said small compartment from another, and a chemical reactive operation itself or part of the operation is performed by uniting ~~[[it]]~~ the optional droplet with ~~the other~~ another droplet out of said plural kinds arranged in the other small compartments.

24. (Currently Amended) The chemical analytic apparatus according to claim 23, wherein when the optional droplet out of said plural kinds to which said magnetic ultrafine particles are mixed and which is arranged in the optional small compartment is conveyed to said other small ~~compartment~~ compartments by said conveyance step by passing through each bulkhead ~~provided in each said~~ separating one small compartment from another,

the optional droplet out of said plural kinds to which said magnetic ultrafine particles are mixed is separated to ~~[[the]]~~ a droplet that includes said magnetic ultrafine particles and ~~[[the]]~~ a droplet that does not include said magnetic ultrafine particles, by using physical and chemical characteristics such as wettability and surface tension of said optimal droplet.

25. (Previously Presented) The chemical analytic apparatus according to claim 23, wherein by controlling the magnetic field which is externally applied to the droplet to which said magnetic ultrafine particles are mixed, said magnetic ultrafine particles are dispersed and cohered in the inside of the droplet, and also the operation of a specimen that adhered to surfaces of said magnetic ultrafine particles is performed.

26. (Currently Amended) The chemical analytic apparatus according to claim 25, wherein

other than the control of said external magnetic field, ~~[[the]]~~ at least physical and chemical reaction control by ~~at least~~ light, heat or pH is used.

27. (Previously Presented) The chemical analytic apparatus according to claim 23, wherein in the condition where a specimen for performing chemical reactive operation adhered to surfaces of said magnetic ultrafine particles, said magnetic ultrafine particles are used as a carrier to perform the chemical reactive operation to said specimen.

28. (Currently Amended) The chemical analytic apparatus according to claim 23, wherein by combining a plurality of said small compartments which are separated by plural bulkheads and which form the processing conditions by said processing steps, at least a series of chemical reactive operation by ~~at least~~ reaction, separation and dilution to ~~[[the]]~~ a specimen that adhered to surfaces of said magnetic ultrafine particles is performed.
